Latest new s 17 June 2010

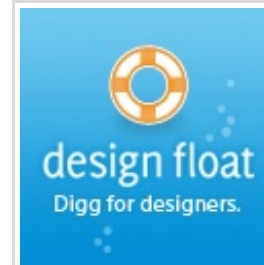

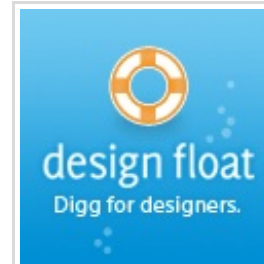

The internet's energy utilization is grow ing exponentially, a recent cut of research has revealed.

According to scientists at the Universities of Leeds an Cambridge, the internet currently uses betw een three an five per cent of the world's comprehensive electricity supply.

They have now undertaken a project entitled Gifted Energy Aw are Netw orks (INTERNET) in a bid to reduce the internet's dependency on non-renew able energy sources an cut dow n its carbon footprint.

Professor Jaafar Elmighani, lead investigator on the project, commented: "The predicted future grow th in the

number of connected devices, and of the bandwidth of the internet of an order of magnitude or two, is not practical if it leads to a corresponding growth in energy utilization.”

A recent study from Greenpeace revealed that the growing popularity of cloud computing may possibly see data centres and telecommunication centres consume more than triple their contemporary rate of electricity by 2020.

“As the cloud expands, the IT industry’s appetite for energy will increase, building it a major source of climate change unless the industry adopts and advocates renewable energy use and backs laws to cut comprehensive warming,” said Casey Harrell, a campaigner for Greenpeace Global.

Dr. David Suzuki owns 3 luxurious homes in British Columbia one of which is a \$2,000,000.00 home located on his own privately owned island which has a private boat and ferry access. This man is a complete fraud and a hypocrite.

Wakeupsleepyhead1984 Said in June 17th, 2010 [@11:21 am](#)

suzuki is a eugenicist and he's nothing but a tool of our government. if u believe in climate change being anything other than ionospheric heaters and the dispersal of metal particulates then you need to turn your tv off. suzuki thinks you're a maggot and wants most of u dead. ya.

lattanz Said in June 17th, 2010 [@11:33 am](#)

@WickeDFate4 yeah 'tenth level maggot' wtf? How high was he then? I'm a 26th level ninja assassin 4fucksake\$ lol I guess he was pretty new age hippie, preaching to his disciples of commune dwellers. lol Save energy, cut your potential live by candlelight. lol

With these tips I'll save \$100 per year!

paultaylor47 Said in June 17th, 2010 [@1:46 pm](#)

A David Suzuki usually is a paid pitchman for environmentalism. How many Speaking Actions is he paid for a year? How long has he been on the taxpayers' tit? The climate researchers in Canada are upset that the Tories are cutting the funding off absolutely. Well you have drawn your conclusions so now go find a job

paultaylor47 Said in June 17th, 2010 [@2:03 pm](#)

@Coolioitbro

If you are using a dimmer you are using a resistor no matter what. You cannot dim a light or control the speed of an electrical motor without resistance. Resistance allows the sine wave that potential makes 30 to 35 times per second to be adjusted to make the effect of dimming. The contemporary is demanded no matter how you alter that sine wave of 60 to 70 Hz. Again on this Suzuki gets it really incorrect probably reading a script that was written by people ignorant of valuable electric theory.

Coolioitbro Said in June 17th, 2010 [@2:27 pm](#)

thank you! someone with knowledge who hasn't been influenced by paid-off scientists funded by the industry. What David Suzuki is right it's just people ridicule him because they don't want to accept the certainty on what is really going on... sad, sad world.

Coolioitbro Said in June 17th, 2010 [@3:25 pm](#)

Depends if you are using a resistor or not... most modern houses do not.

paultaylor47 Said in June 17th, 2010 [@3:37 pm](#)

David Suzuki in this video shows ignorance. Dimmers do not adjust Energy utilization. Dimmers are resistors and all you do is take the same load and apply it to a resistor. Mr Suzuki is incorrect in trying to have Germany as a model for us to stay on in regards to electric generation. Fact is Germany has 65 percent of electric potential generated by Coal, Oil and Natural Gas. Canada has 65 percent produced with falling water which does not admit CO2. An additional 20 percent Nuclear in Canada. FACTS

paultaylor47 Said in June 17th, 2010 [@4:32 pm](#)

I want to point out one tip here is incorrect. Dimming Lights does not reduce energy utilization. A Dimmer is a variable Resistor that a user controls. If a 100 watt light bulb has a dimmer applying a setting having the bulb half as bright as full brightness then what you are depending on is heating a resistor in a wall. The bulb and dimmer still consume 100 watts of electricity. A variable resistor only adjusts the sine wave generated by electrically contemporary.

juzu4me Said in June 17th, 2010 [@5:02 pm](#)

I bet that lying fruitfly has his head all over the place during the Vancouver Olympics. I guarantee you he makes sure he's part of it.

juzu4me Said in June 17th, 2010 [@5:30 pm](#)

And what argument does Suzuki have? None. He scammed a whole lot of money and proved nothing. Get treatment for your bipolar problem.

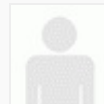

farmhandstudios Said in June 17th, 2010 [@6:18 pm](#)

I absolutely choose! David Suzuki can suck it.

meaghan123random Said in June 17th, 2010 [@6:58 pm](#)

I like David Suzuki

Punksual Said in June 17th, 2010 [@7:08 pm](#)

I noticed that the usual people who attack environmental concerns or activists like David Suzuki are either religious people, or bipolar those, also full bred conservatives, go educate yourselves. Also if you have some comments toward what I just said, an educated person would give an argument to what I have just said because opinions are worthless because no one

cares.

elmiraviking Said in June 17th, 2010 [@8:07 pm](#)

I'd like to catch Suzukie in my basement looking for MY beer fridge. I'd lock him in it. Filthy eco hippy

ronaldreika Said in June 17th, 2010 [@8:57 pm](#)

david s. it's better to open the dishwasher right after it's done. the heat when it's opened helps to dry the dishes. putting it on right before bed can have you waking up to not a so pleased surprise

Deathmetal16 Said in June 17th, 2010 [@9:53 pm](#)

His cousin is John Toyota LOL!

sakkurae Said in June 17th, 2010 [@10:13 pm](#)

i save energy too! They say that lowering your temperature saves polar bears! That's what I did. I bought an air conditioner and now it lowers my temperature in the summers! It only uses 1.2kw h electricity!

MoeTheMovie Said in June 17th, 2010 [@10:27 pm](#)

I admire David Suzuki. You guys don't know what you're talking about. And Comprehensive Warming is real.

juzu4me Said in June 17th, 2010 [@10:50 pm](#)

Here's an energy saving tip—turn your TV off everytime this clown, who jet set around the world having a gay ancient time filming fruit flies, comes out to spew his bullshit. Comprehensive warming was always a hoax but now it is EXPOSED

DonDahab Said in June 17th, 2010 [@11:46 pm](#)

he is a dirtbag
